

PiXel8-RF Microneedling Post-Treatment Instructions

- A certain degree of discomfort, redness, and/or irritation during and after treatment is expected. If any discomfort or irritation persists for more than 24 hours, please notify the clinic.
- Tiny scabs (of less than 1 mm in diameter) may form 24-72 hours post-treatment and may remain for several days. The scabs should not be touched or scratched (even if they itch) and should be allowed to shed naturally.
- Avoid hot baths, massages, irritating skincare products, exfoliants, etc. during the first two days after treatment to prevent trauma to the treated site. Keep the skin clean to prevent contamination or infection and avoid any mechanical or thermal damage to the area.
- For burning sensation, spritz the treatment area with a diluted vinegar solution (1 tsp. white vinegar per 8 oz. water).
- It is important to keep your skin moisturized after the treatment.
- You may have mild swelling 1-3 days after your treatment. You may apply an icepack (NOT direct ice) to the irritated area for 1-2 days in approximately 15-minute sessions, 3-4 times per day.
- Redness for 1-3 days is common. After 12-hours post-procedure, you may apply a hydrocortisone cream 3-4 times per day to reduce redness.
- Makeup can be applied 24 hours after treatment.
- Avoid prolonged sun exposure or use of tanning beds for at least two weeks after the treatment, as the skin that was treated will be more sensitive to the sun after your ablative treatment.
- Use a minimum of SPF 30 daily to protect your skin after your treatment.
