## **PiXel8 RF Microneedling Pre-Treatment Instructions**

- Reveal any medical conditions such as pregnancy, cold sores and fever blister tendencies, any type of allergy, recent facial peels or surgery, and all current medications (including both prescriptions and over-the-counter products) such as Accutane, tetracycline, hormone replacement therapy, or use of Retin-A.
- Discontinue the use of Accutane for three months prior to having a PiXel8-RF microneedling treatment.
- PiXel8-RF CAN NOT be performed on a patient if he/she has an electronic implant (insulin pump, pacemaker, LVAD, etc.).
- Do not use self-tanning lotions or tanning booths two weeks prior to your PiXel8-RF treatment. Do not sunbathe two weeks prior to your treatment.
- Do not use any irritating skincare products such as Retin-A for one week prior to treatment.
- Avoid taking NSAIDs such as Advil, Motrin, Aleve, and aspirin for one week prior to the scheduled procedure.
- Be aware that areas of dental crowns, caps, braces, or other metal dental implants may be more sensitive to the treatment, and your provider may use gauze or a tongue depressor to isolate the area to make the treatment more comfortable.
